

The screenshot shows the Amazon Route 53 home page. At the top, there's a navigation bar with the AWS logo, 'Services' dropdown, 'Resource Groups' dropdown, a bell icon, 'deploy @ fem-dryrun', 'Global' dropdown, and 'Support' dropdown. The main title 'Amazon Route 53' is centered above a description: 'You can use Amazon Route 53 to register new domains, transfer existing domains, route traffic for your domains to your AWS and external resources, and monitor the health of your resources.' A large orange 'T' logo is positioned above the title. A prominent red arrow points downwards from the top right towards the first 'Get started now' button.

DNS management

If you already have a domain name, such as example.com, Route 53 can tell the Domain Name System (DNS) where on the Internet to find web servers, mail servers, and other resources for your domain.

[Learn More](#)

Traffic management

Route 53 traffic flow provides a visual tool that you can use to create and update sophisticated routing policies to route end users to multiple endpoints for your application.

[Learn More](#)

Availability monitoring

Route 53 can monitor the health and performance of your application as well as your web servers and other resources. Route 53 can also redirect traffic to healthy resources.

Domain registration

If you need a domain name, you can find available name and register it by using Route 53. You can also make Route 53 the registrar for existing domains that you registered with other registrars.

A screenshot of the AWS Route 53 console. The top navigation bar shows the AWS logo, Services dropdown, Resource Groups dropdown, and Global dropdown. The main content area has a sidebar on the left with links like Dashboard, Hosted zones, Health checks, Traffic flow, Traffic policies, Policy records, Domains, Registered domains (which is selected), and Pending requests. The main panel title is 'Domain Listing'. It features three buttons: 'Register Domain' (highlighted with a red arrow), 'Transfer Domain', and 'Domain Billing Report'. Below these are search and filter options: 'Search domains by prefix' with a clear button, and filters for 'Domain Name', 'Privacy Protection', 'Expiration Date', 'Auto Renew', and 'Transfer Lock'. A message 'No domains to display' is centered. The bottom of the page includes standard AWS footer links: Feedback, English (US), Copyright notice (2008-2018), Privacy Policy, and Terms of Use.

Check your contact details

Confirm that the following contact information is correct. When you complete your purchase, we'll use this information for all of the domains in your shopping cart.

Registrant Contact	Administrative Contact	Technical Contact
		

Managing DNS for Your New Domain

To make it easier for you to use Route 53 as the DNS service for your new domain, we'll automatically create a hosted zone. That's where you store information about how to route traffic for your domain, for example, to an Amazon EC2 instance. If you won't use your domain right now, you can delete the hosted zone. If you will use your domain, Route 53 charges for the hosted zone and for the DNS queries that we receive for your domain. For more information, see [Amazon Route 53 Pricing](#).

Terms and Conditions

Amazon Route 53 enables you to register and transfer domain names using your AWS account. However, AWS is not a domain name registrar, so we use registrar associates to perform registration and transfer services. When you purchase domain names through AWS, you are registering your domain with one of our registrar associates. The registrar for your domain will periodically contact the registrant contact that you specified to verify the contact details and renew registration.
